Second Grade
SCIENCE
Curriculum Map

Volusia County Schools

Next Generation Sunshine State Standards
The Next Generation Sunshine State Standards for science are organized by grade level for grades K-8 and by Bodies of Knowledge for grades 9-12. Eighteen Big Ideas are encompassed in grades K-12 and build in rigor and depth as students advance. Each grade level includes benchmarks from the four Bodies of Knowledge (Nature of Science, Life Science, Earth and Space Science, and Physical Science).

**Second Grade Overview**

Second Grade focuses instructional delivery for science within the following ten (10) Big Ideas/Standards:

**Nature of Science**
- Big Idea 1 – The Practice of Science

**Earth and Space Science**
- Big Idea 6 – Earth Structures
- Big Idea 7 – Earth Systems and Patterns

**Physical Science**
- Big Idea 8 – Properties of Matter
- Big Idea 9 – Changes in Matter
- Big Idea 10 – Forms of Energy
- Big Idea 13 – Forces and Changes in Motion

**Life Science**
- Big Idea 14 – Organization and Development of Living Organisms
- Big Idea 16 – Heredity and Reproduction
- Big Idea 17 – Interdependence

### 5E Learning Cycle: An Instructional Model

<table>
<thead>
<tr>
<th><strong>ENGAGEMENT</strong></th>
<th><strong>EXPLORATION</strong></th>
<th><strong>EXPLANATION</strong></th>
<th><strong>ELABORATION</strong></th>
<th><strong>EVALUATION</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>The engagement phase of the model is intended to capture students’ interest and focus their thinking on the concept, process, or skill that is to be learned. During the engagement phase, the teacher is on center stage.</td>
<td>The exploration phase of the model is intended to provide students with a common set of experiences from which to make sense of the concept, process, or skill that is to be learned. During the exploration phase, the students come to center stage.</td>
<td>The explanation phase of the model is intended to grow students’ understanding of the concept, process, or skill and its associated academic language. During the explanation phase, the teacher and students share center stage.</td>
<td>The elaboration phase of the model is intended to construct a deeper understanding of the concept, process, or skill through the exploration of related ideas. During the elaboration phase, the teacher and students share center stage.</td>
<td>The evaluation phase of the model is intended to be used during all phases of the learning cycle driving the decision-making process and informing next steps. During the evaluation phase, the teacher and students share center stage.</td>
</tr>
</tbody>
</table>

#### What does the teacher do?
- **create** interest/curiosity
- **raise** questions
- **elicit** responses that uncover student thinking/prior knowledge (preview/process)
- **remind** students of previously taught concepts that will play a role in new learning
- **familiarize** students with the unit

#### What does the student do?
- **show** interest in the topic
- **reflect** and **respond** to questions
- **ask** self-reflection questions:
  - What do I already know?
  - What do I want to know?
  - How will I know I have learned the concept, process, or skill?
- **make** connections to past learning experiences

#### Evaluation of Engagement
The role of evaluation during the engagement phase is to gain access to students’ thinking during the pre-assessment event/activity. Conceptions and misconceptions currently held by students are uncovered during this phase. These outcomes determine the concept, process, or skill to be explored in the next phase of the learning cycle.

#### Evaluation of Exploration
The role of evaluation during the exploration phase is to gather an understanding of how students are progressing towards making sense of a problem and finding a solution. Strategies and procedures used by students during this phase are highlighted during explicit instruction in the next phase. The concept, process, or skill is formally explained in the next phase of the learning cycle.

#### Evaluation of Explanation
The role of evaluation during the explanation phase is to determine the students’ degree of fluency (accuracy and efficiency) when solving problems. Conceptual understanding, skill refinement, and vocabulary acquisition during this phase are enhanced through new explorations. The concept, process, or skill is elaborated in the next phase of the learning cycle.

#### Evaluation of Elaboration
The role of evaluation during the elaboration phase is to determine the degree of learning that occurs following a differentiated approach to meeting the needs of all learners. Application of new knowledge in unique problem-solving situations during this phase constructs a deeper and broader understanding. The concept, process, or skill has been and will be evaluated as part of all phases of the learning cycle.

<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Students will:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• discuss as a class their understanding of science (e.g., “What does science look like? Smell like? Feel like? Sound like? Taste like?...MAYBE”).</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• develop science notebooks that will be used all year long to document new learning that results from investigations (how scientists document their work in the real-world).</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• explore how science is used every day (e.g., sharpening a pencil, riding a bicycle, observing a dead bug, selecting food for energy)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• explore different types of scientists (e.g., astronomer, botanist, meteorologist, doctor, archaeologist, chef, student, teacher, principal, mom, dad).</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• explain that scientists:</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>o solve problems by first asking questions.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>o work alone or in groups to find dependable solutions to problems.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>o seek new solutions that are simpler, faster, and more efficient.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>SC.2.N.1.6</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Teacher Hints for “Science”**:  
- Digital textbook resources can be accessed through V-Portal. See the 2nd Grade Science Canvas site for Digital Program Access information and resources.  
- Science is everything; everything is science. Science is all around us all the time. We are scientists every moment of our lives.  
- A science notebook is a compilation of student learning that provides a partial record of the instructional experiences a student has in the classroom. Stapled paper, composition books, spiral notebooks, or 3-ring binders could be used to organize student work.

**gram**  
**length**  
**measurement (metric)**  
**observation**  
**scientific tools**
- beaker  
- graduated cylinder  
- hand lens  
- magnet  
- measuring cup  
- meter stick  
- pan balance  
- ruler (metric)  
- scale  
- stopwatch  
- tape measure  
- thermometer  

**temperature**  
**weight**
**Teacher Hints for “Science Tools”:**
- Students will have some experience with scientific tools. This year is spent developing proficient use of scientific tools to improve accuracy.
- Linear measurement (inches and centimeters) has been introduced in previous years.
- Expose students to tools as they are used. Students should not be required to memorize a list of scientific tools by the end of week 3.

<table>

<tr>
<td>- <strong>generate</strong> questions about the world around them.</td>
<td></td>
</tr>
<tr>
<td>- <strong>predict</strong> what may happen prior to engaging in an exploration activity based on one of their questions.</td>
<td></td>
</tr>
<tr>
<td>- <strong>record</strong> data in the form of observations using the five senses during the activity in a science notebook.</td>
<td></td>
</tr>
<tr>
<td>- <strong>record</strong> data in the form of measurements using science tools (e.g., beakers, graduated cylinders, rulers, thermometers) made during the activity in a science notebook.</td>
<td></td>
</tr>
<tr>
<td>- <strong>make inferences</strong> (assumptions or possible explanations) using observable and measurable data collected during the exploration activity.</td>
<td></td>
</tr>
<tr>
<td>- <strong>distinguish</strong> between observations and inferences that have been recorded in a science notebook during the exploration activity.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Week 1-3</th>
<th>Scientific Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>This topic is continued on the next page.</strong></td>
<td></td>
</tr>
</tbody>
</table>

### Teacher Hints for “Inquiry Skills”:
- Refer to page 29 in the Grade 2 Science Curriculum Map for an explanation of basic and integrated science process skills.
- Consider using pictures to instruct the difference between an observation and an inference prior to engaging in an exploration activity.
- Be creative when selecting an exploration activity (e.g., display unfamiliar objects/pictures, take a nature walk, sort a collection of objects).
- In Grade 2, students will begin transitioning from customary units of measure (inches) to metric units of measure (centimeters, meters, and grams).
- An enrichment opportunity for a class discussion would be to have students discuss and explain why it is more likely for an inference to be wrong than an observation (although it is possible for both to be wrong).
### Week 1-3

#### Scientific Methods

**Explain how particular scientific investigations should yield similar conclusions when repeated.**

**Students will:**
- **compare** the results of each trial that has been conducted during an investigation.
- **discuss** why differences and similarities sometimes occur.
- **explain** that scientific investigations should yield similar conclusions when repeated.

Please note: Teachers may wish to begin growing plants in various types of soil for the next unit of study.

<table>
<thead>
<tr>
<th>SC.2.N.1.4</th>

</thead>
<tbody>
<tr>
<td>Embedded</td>
<td>Nature of Science</td>
</tr>
<tr>
<td>SC.2.N.1.1</td>
<td>SC.2.N.1.2</td>
</tr>
<tr>
<td>SC.2.N.1.3</td>
<td>SC.2.N.1.5</td>
</tr>
<tr>
<td>SC.2.N.1.6</td>
<td></td>
</tr>
</tbody>
</table>

**Teacher Hints for “Scientific Methods”:**
- Design a class investigation, collect data, and find results. This can happen several times throughout the school year, and not just within the first three weeks of school.
- Teachers may want to direct students’ thinking to begin understanding why multiple trials are important to the experimental process (similar results increase reliability of data).
- When an investigation yields similar results, it does not mean that the results will be exactly the same for each trial. Results are considered similar when an acceptable range of data has been recorded for multiple trials conducted in the same manner.
- Developing a class investigation to share with others in the school is a great way to show that scientists communicate their results with other scientists.

The first 3 weeks of instruction are meant to be an introduction to science. Students are NOT expected to MASTER the Nature of Science standards during these 3 weeks. These standards continue to be instructed throughout the year to be mastered by week 38.
<table>

</tr>
<tr>
<td></td>
<td>• discuss the many uses of rocks (e.g., tile countertops, aquarium, jewelry, seawall).</td>
<td></td>
<td>texture weight</td>
</tr>
<tr>
<td></td>
<td>• explain how they know that Earth is made up of rocks.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Students will:</strong></td>
<td>Describe how small pieces of rock and dead plant and animal parts can be the basis of soil and explain the process by which soil is formed.</td>
<td>SC.2.E.6.2</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Students will:</td>
<td></td>
<td>clay decay</td>
</tr>
<tr>
<td></td>
<td>• record observations of soil found on school campus as seen through a hand lens.</td>
<td>Embedded Nature of Science</td>
<td>humus sand</td>
</tr>
<tr>
<td></td>
<td>• compare observations of soil made by different groups using the same tools.</td>
<td>SC.2.N.1.2</td>
<td>soil weathering</td>
</tr>
<tr>
<td></td>
<td>• explain the basis of soil composition (small pieces of rock/dead plant and animal parts).</td>
<td>SC.2.N.1.3</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• explain how soil is formed (weathering of rock and the decomposition of dead plant and animal remains).</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Students will:</strong></td>
<td>Classify soil types based on color, texture (size of particles), the ability to retain water, and the ability to support the growth of plants.</td>
<td>SC.2.E.6.3</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Students will:</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• sort and classify soil types (clay, sand, silt, and humus) based on color, texture, and size of particles.</td>
<td>Embedded Nature of Science</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• investigate alone and/or in groups the ability of different soils to hold water.</td>
<td>SC.2.N.1.1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• investigate which soil types best support plant growth.</td>
<td>SC.2.N.1.2</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• record observations and measurements collected during the soil investigation.</td>
<td>SC.2.N.1.4</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• compare findings with classmates and record changes in thinking after listening to the ideas of classmates.</td>
<td>SC.2.N.1.6</td>
<td></td>
</tr>
</tbody>
</table>

**Teacher Hints for “Rocks/Soil”:**
- Teachers should take the opportunity to discuss the vocabulary of physical properties (size, shape, color, texture) and how they relate to rocks and soil.
- Students do not need to know the three types of rock (igneous, sedimentary, and metamorphic). They only need to be able to describe different rocks and discuss how they differ.
- Following a comparison of rock observations with peers, students should be encouraged to re-evaluate their initial observations after listening to the thinking of their classmates. Students should be given the opportunity to make changes to their recorded observations in their student notebook.
- Discussing composting is acceptable at this time. Caution: Compost contains bacteria that should NOT be handled by students.
## Teacher Notes

All optional curriculum resources can be found on the 2nd Grade Science Canvas Site
### NGSSS BODY OF KNOWLEDGE:
- Nature of Science/Earth and Space Science/Physical Science

#### Unit of Study:
- Weather

#### Prerequisite Learning:
- Kindergarten – none
- First Grade – none

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td><strong>Weeks 8-9</strong></td>
<td><strong>Weather Patterns</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
|                      | Compare and describe changing patterns in nature that repeat themselves, such as weather conditions including temperature and precipitation, day to day and season to season. Measure and compare temperatures taken every day at the same time. Students will:  
  - discuss what weather is and how weather changes.  
  - explain that a weather pattern occurs day to day.  
  - predict and record a description of weather conditions each day for two weeks (e.g., hot, cold, windy, sunny, cloudy)  
  - predict and record measurements of air temperature (thermometer) and precipitation (rain gauge) every day at the same time in science notebooks.  
  - compare predictions of weather to actual results.  
  - organize measurements in appropriate data displays (e.g., data tables, graphs).  
  - discuss findings in small groups and as a class.  | SC.2.E.7.1  
SC.2.P.8.5  
Embedded Nature of Science  
SC.2.N.1.1  
SC.2.N.1.2  
SC.2.N.1.6  | Celsius (°C)  
Fahrenheit (°F)  
fall  
precipitation  
rain gauge  
rainfall  
seasons  
spring  
summer  
temperature  
thermometer  
weather  
weather patterns  
winter |
|                      | **Students will:**  
  - discuss and explain what seasons are.  
  - sequence seasons, using pictures, in the order they occur starting at any point in the cycle.  
  - sequence seasons according to temperature.  
    - coldest to hottest - winter, fall, spring, summer  
    - hottest to coldest – summer, spring, fall, winter  
  - explain that a weather pattern also occurs season to season. |                             |                                   |

**Teacher Hints for “Weather Patterns”:**
- Temperature is a measure of how hot or cold something is. A thermometer is the tool that is typically used to measure temperature.
- Precipitation is the form of water that falls from the sky (rain, snow, sleet, and hail). A rain gauge is the tool that is typically used to measure precipitation.
### Weeks 10-11
#### Sun’s Energy

Investigate by observing and measuring, that the Sun’s energy directly and indirectly warms the water, land, and air.

**Students will:**
- **investigate** that heat from the sun causes an increase in temperature.
- **discuss and explain** that more direct exposure to the sun causes a greater increase in temperature.
- **Investigate and record** patterns of change as the sun directly and indirectly heats land (soil), air, and water.
  - direct – placing objects in sun’s direct rays
  - indirect – placing objects in containers that are not in sun’s direct rays (e.g., hot dog in a solar oven, chocolate in a paper bag, crayons in a pencil box, air in a sealed jar, vegetable oil in a plastic bag)
- **compare** results with their peers.
- **answer** “how do you know” questions to communicate own thinking.
- **ask** “how do you know” questions to understanding peers’ thinking.

Investigate, observe and describe how water left in an open container disappears (evaporates), but water in a closed container does not disappear (evaporate).

**Students will:**
- **investigate and record** how water left in an open container seems to disappear (evaporate) and water in a closed container does not disappear (evaporate).
- **compare** the results of the two investigations.
- **discuss** the impact sun’s energy plays in evaporation.
- **explain** that air/water are in constant motion as water changes from a liquid to water vapor.

---

**Teacher Hints for “Sun’s Energy”:**
- Evaporation in an open system can be measured by tracking a change in volume or mass of water in a container.
- Evaporation in a closed system is difficult to observe. We see evidence of evaporation occurring when we see tiny water droplets appear on the sides of the container. While this is actually the process of condensation, evaporation must have occurred in order for that to show up.
- The water cycle is not taught at this grade level.

---

**Week 12
Wind/Severe Weather**

This topic is continued on the next page.

---

**Week 12: Wind/Severe Weather**

**Investigate that air is all around us and that moving air is wind.**

**Students will:**
- **explain** that air is all around us even though it cannot be seen.
- **observe** that air takes up space and has weight.
- **define** wind as moving air.
- **investigate** the effects of wind on various objects (e.g., leaves, pinwheels, sand, sailboats).
- **identify** ways wind can be harnessed for human use (e.g., windmills, hand-held fans).
- **explain** that wind can be a source of great power and can cause damage and dangerous storms (e.g., hurricane, tornado).

<td></td>
<td>Recognize that solids have a definite shape and that liquids and gases take the shape of their container. Students will:  - explain that one physical characteristic of a solid is that it has a definite shape.  - investigate how the shape of a solid can be changed by applying energy or a force to it (e.g., fold, cut, hammer, slice, twist, heat).  - explain that one physical characteristic of a liquid is that it takes the shape of its container.  - investigate how a liquid flows from one place to another when it is not contained.  - explain that one physical characteristic of a gas is that it takes the shape of its container.  - compare any two forms of matter.</td>
<td>SC.2.P.8.3</td>
<td>Embedded Nature of Science SC.2.N.1.1</td>
</tr>
<tr>
<td></td>
<td>Observe and describe water in its solid, liquid, and gaseous states. Students will:  - observe and describe water in its solid, liquid and gaseous state.  - investigate how a change in temperature changes the physical properties of water (heating, cooling, freezing, boiling, melting, evaporating).  - explain that water is still water even when it changes from a solid to a liquid to a gas and vice versa.</td>
<td>SC.2.P.8.4</td>
<td>Embedded Nature of Science SC.2.N.1.1  Embedded Earth Science SC.2.E.7.3</td>
</tr>
</tbody>
</table>

**Teacher Hints for “States of Matter”:**
- Students do not need to know about the particle arrangement of each state of matter.
**Week 22**  
**Volume**

*Measure and compare the volume of liquids using containers of various shapes and sizes.*

**Students will:**
- define volume as the amount of space a substance (solid, liquid, or gas) takes up.
- recognize volume as a physical characteristic of all forms of matter (solid, liquid, gas) that can be measured.
- measure the volume of liquids using a variety of scientific tools (e.g., beakers, graduated cylinders).
- compare equal volumes of liquids using containers of various shapes and sizes.
- discuss how the shape of a liquid may change when placed in different containers even though the volume of the liquid does not.

**Teacher Hints for “Volume”:**
- Volume is another measurable property of matter. It is introduced here in conjunction with learning about the states of matter. All matter has weight (mass) and takes up space (volume).
- Foldables, Thinking Maps®, and other graphic organizers are great tools to use when helping students organize their thinking on this topic.

**Weeks 23**  
**Changes in Matter**

*Investigate that materials can be altered to change some of their properties, but not all materials respond the same way to any one alteration.*

**Students will:**
- investigate ways to change solid and liquid materials (e.g., cut, break, bend, cook, tear, freeze, melt, burn, soak, dissolve, evaporate, heat, rust).
- explain that not all materials change the same way when undergoing the same change.

**Teacher Hints for “Changes in Matter”:**
- At this grade level, students do not need grapple with differentiating between physical and chemical changes. The expectation is that students are able to make observations of changes and communicate their observations clearly and efficiently with their teacher and classmates.
- Water is an example of matter that can exist as a solid, liquid, or gas.
Teacher Notes

All optional curriculum resources can be found on the 2nd Grade Science Canvas Site
### NGSSS BODY OF KNOWLEDGE: NATURE OF SCIENCE/PHYSICAL SCIENCE

**Unit of Study:** Energy & Motion

**PACING:** Weeks 24 – 28
February 11 – March 14

**Prerequisite Learning**

### Topics

<table>
<thead>
<tr>
<th>Learning Targets/Skills</th>
<th>Benchmarks</th>
<th>Academic Language</th>
</tr>
</thead>
</table>
| Discuss that people use electricity or other forms of energy to cook their food, cool or warm their homes, and power their cars. **Students will:**  
• identify ways people use the energy from the sun, wind, and water.  
• match an object with its energy source (e.g., hair dryer-electricity, animals-food, car-gas, calculator-sun).  
• explain various ways people need and use energy (e.g., cooking food, heating/cooling homes, powering cars, cooling off). | SC.2.P.10.1  
Embedded Nature of Science SC.2.N.1.1 SC.2.N.1.6 | electricity  
estorage  
energy  
energy sources  
heat  
light  
solar  
sound |

#### Teacher Hints for “Forms of Energy”:
- Grade 2 students focus on the ways energy impacts our lives (electrical energy, solar energy, light energy, heat energy, and sound energy).  
- Energy is the ability to do work. Energy causes motion and causes change.

### Weeks 26-27

**Forces and Changes in Motion**

This topic is continued on the next page.

**Learning Targets/Skills**

- Investigate the effect of applying various pushes and pulls on different objects. **Students will:**  
• identify pushes and pulls that occur in pictures or nature walk.  
• predict and investigate how a push or pull will affect the motion of an object (speed and direction).  
• record observations of motion investigations in a science notebook.  
• discuss that energy is required for a push or pull to occur.  

- Demonstrate that the greater the force (push or pull) applied to an object, the greater the change in motion of the object. **Students will:**  
• explain that force is a push or pull on an object that causes it to stop, change speed, or change direction.  
• demonstrate that the greater the force (push or pull) applied to an object, the greater the change in motion of the object.  
• observe and explain that it takes more force (push or pull) to change the motion of an object with more weight.  
• compare findings with others.

## Forces and Changes in Motion

### Weeks 26-27

**Recognize that objects are pulled toward the ground unless something holds them up.**

**Students will:**
- **demonstrate and explain** gravity’s effect on objects when dropped (when something is falling it is actually being pulled to Earth by a force called gravity).
- **demonstrate and explain** how to overcome gravity (e.g., student sitting in a chair, pencil on a desk, helium-filled balloon on a string, grasshopper jumping, raft floating on water).

**Teacher Hints for “Forces and Changes in Motion”:**
- A force is a push or a pull. Forces are acting upon you all day.
- Gravity, mass/weight, buoyancy, magnetism, and friction are common forces that can act upon us.

### Week 28

**Demonstrate that magnets can be used to make some things move without touching them.**

**Students will:**
- **investigate** how magnets work (attract vs. repel).
- **investigate and classify** objects that are attracted/not attracted to magnets (wood, plastic, metal).
- **demonstrate** how to move objects (including magnets) with a magnet without contact.
- **observe and explain** that the amount of movement a magnet can cause on a magnetic object is affected by the strength of the magnet and its distance from the object.
- **investigate** ways to change the motion of an object (including a magnet) by using a magnet.
- **explore** the poles of magnets (north and south).

**Teacher Hints for “Magnets”:**
- An assortment of magnets is recommended for magnet investigations (horseshoe, ring, bar, wand, etc.).
- Magnets have a north and south pole even though they may not be marked as such.
- The main emphasis for Grade 2 students is to have a solid understanding of the types of objects that are attracted to magnets. Note: They will quickly build a misconception about metallic objects. Aluminum foil and pennies do not have magnetic properties.
- Students will need time to discover that repulsion (act of repelling) MAY occur when two magnets are brought together.
- Explore the use of contact and non-contact forces to move objects and other magnets with a magnet.

**NGSSS BODY OF KNOWLEDGE:**  
**Unit of Study:** Nature of Science/Life Science

|-----------------------|----------------------------------------|---------------------------|

**Weeks 29-31**  
**Human Body**

Distinguish human body parts (brain, heart, lungs, stomach, muscles, and skeleton) and their basic functions.

**Students will:**
- **identify** outside human body parts (e.g., head, arms, legs, ankles).
- **identify** inside human body structures (limited to brain, heart, lungs, stomach, muscles, and skeleton).
- **describe** the basic function of the brain, heart, lungs, stomach, muscles, and skeleton.
  - brain – gets information from your senses; control center of your body
  - heart – pumps blood and oxygen throughout your body
  - lungs – take in oxygen
  - stomach – breaks down food and mixes it with digestive juices
  - muscles – make your body move (bones, heart, lungs, pupils of your eyes)
  - skeleton – supports your body; gives it shape; protects internal organs

**Topics**

<table>
<thead>
<tr>
<th>Learning Targets/Skills</th>
</tr>
</thead>
</table>

**Weeks 32-35**  
**Life Cycles**

Observe and describe major stages in the life cycles of plants and animals, including beans and butterflies.

**Students will:**
- **observe and describe** major stages in the life cycle of the butterfly (egg, larva, pupa, adult).
- **investigate** the life cycles of other animals (e.g., cat, snake, hamster, spider, fish, kangaroo, salamander, penguin, possum).
- **observe and describe** major stages in the life cycle of the bean plant (seed, seedling, mature plant).
- **investigate** the life cycles of other plants (e.g., marigolds, fern, pine tree, ivy).
- **explain** that, when repeated, life cycle investigations yield the same results.
- **compare** the life cycles of the butterfly to the bean (or other plants to other animals).

**Teacher Hints for “Human Body”:**
- This is the first exposure for students to human body structures and functions outside the work they have done with body parts associated with senses.
- Internal structures are limited to the following: brain, heart, lungs, stomach, muscles, and skeleton.
- In Grade 5, this topic grows to include structures and functions of the following: pancreas, liver, gall bladder, small and large intestines in grade 5.
- Human body systems, such as digestive, circulatory, and nervous, are now taught in middle school.

**Teacher Hints for “Life Cycles”:**
- All living things have a life cycle; not just frogs and butterflies (common misconception held by young learners).
- This is the first year this topic is formally taught to children. Previous grade levels may have spent some time observing the growth and development of plants and animals.
- Not all animals go through the same kind of change. Some grow from smaller to larger (kitten to cat, shark pup to shark, infant to adult). Some start as one animal and change to something completely different (e.g., mealworm to beetle, tadpole to frog, caterpillar to butterfly).
**Teacher Notes**

All optional curriculum resources can be found on the 2nd Grade Science Canvas Site
**NGSSS BODY OF KNOWLEDGE:**  | **NATURE OF SCIENCE/LIFE SCIENCE**

</table>
| **Basic Needs**  
Weeks 36-37 | **Compare and contrast the basic needs that all living things, including humans, have for survival.**  
**Students will:**  
- **identify** the basic needs of plants (water, light, air, nutrients, space).  
- **identify** the basic needs of animals (water, air, food, shelter, space).  
- **compare** the basic needs that all living things (plant and animal) have for survival.  
- **investigate** a plant's ability to survive when one of its basic needs are not met.  
- **compare** findings with other groups focusing on any differences that may have occurred.  
- **describe** how different animals and plants depend on each other and the environment to meet their basic needs.  
**Recognize and explain that living things are found all over Earth, but each is only able to live in habitats that meet its basic needs.**  
**Students will:**  
- **describe** different environments (e.g., ocean, rain forest, desert, tundra, prairie, wetlands, woodland).  
- **match** plants and animals to their environments/habitats (e.g., wetlands, desert, woodland, prairie, ocean, rainforest, arctic).  
- **explain** that plants and animals live in habitats that meet their basic needs. | **SC.2.L.17.1**  
Embedded Nature of Science  
SC.2.N.1.1  
SC.2.N.1.2 |  
**basic needs**  
- air  
- food  
- light  
- nutrients  
- shelter  
- space  
- water  
**environment/habitat**  
- arctic  
- desert  
- ocean  
- prairie  
- rain forest  
- tundra  
- wetlands  
- woodland  
**living survival** |

**Teacher Hints for “Basic Needs”:**  
- In previous years, students have learned about the basic needs of all living things. In Grade 2, they focus on being able to compare the basic needs of two living organisms.  
- Plants and animals are adapted to survive in different environments. Students should be able to discuss the features they have that allow them to survive in their specific environment.

HEALTH

Students will:

HE.2.B.3.2 Name healthy options to health-related issues or problems.

HE.2.C.1.6 Recognize the locations and functions of major human organs.

LANGUAGE ARTS

Students will:

LAFS.2.RI.1.3 Describe the connections between a series of historical events, scientific ideas or concepts, or steps in technical procedures in a text.

LAFS.2.RI.2.4 Determine the meanings of words and phrases in a text relevant to a grade 2 topic or subject area.

LAFS.2.RI.4.10 By the end of year, read and comprehend informational texts, including history/social studies, science, and technical texts, in the grades 2-3 text complexity band proficiently, with scaffolding as needed at the high end of the range.

LAFS.2.SL.1.1 Participate in collaborative conversations with diverse partners about grade 2 topics and texts with peers and adults in small and larger groups.
   a. Follow agreed-upon rules for discussions (e.g., gaining the floor in respectful ways, listening to others with care, speaking one at a time about the topics and texts under discussion).
   b. Build on others’ talk in conversations by linking their comments to the remarks of others.
   c. Ask for clarification and further explanation as needed about the topics and texts under discussion.

LAFS.2.W.3.7 Participate in shared research and writing projects (e.g., read a number of books on a single topic to produce a report; record science observations).

LAFS.2.W.3.8 With guidance and support from adults, recall information from experiences or gather information from provided sources to answer a question.

MATHEMATICS

Students will:

MAFS.2.MD.4.9 Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units.

MAFS.2.MD.4.10 Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put-together, take-apart, and compare problems using information presented in a bar graph.

TECHNOLOGY

Students will:

Creativity and innovation
Demonstrate creative thinking, construct knowledge, and develop innovative products and processes using technology.

Communication and collaboration
Use digital media and environments to communicate and work collaboratively, including at a distance, to support individual learning and contribute to the learning of others.

Research and informational fluency
Apply digital tools to gather, evaluate, and use information.

Critical thinking, problem solving, and decision making
Use critical thinking skills to plan and conduct research, manage projects, solve problems, and make informed decisions using appropriate digital tools and resources.

Digital Citizenship
Understand human, cultural, and societal issues related to technology and practice legal and ethical behavior.

Technology operations and concepts
Demonstrate a sound understanding of technology concepts, systems, and operations.
MAKING CONNECTIONS

Standards for Mathematical Practice

Students will:

Make sense of problems and persevere in solving them. (SMP.1)
Solving a mathematical problem involves making sense of what is known and applying a thoughtful and logical process which sometimes requires perseverance, flexibility, and a bit of ingenuity.

Reason abstractly and quantitatively. (SMP.2)
The concrete and the abstract can complement each other in the development of mathematical understanding: representing a concrete situation with symbols can make the solution process more efficient, while reverting to a concrete context can help make sense of abstract symbols.

Construct viable arguments and critique the reasoning of others. (SMP.3)
A well-crafted argument/critique requires a thoughtful and logical progression of mathematically sound statements and supporting evidence.

Model with mathematics. (SMP.4)
Many everyday problems can be solved by modeling the situation with mathematics.

Use appropriate tools strategically. (SMP.5)
Strategic choice and use of tools can increase reliability and precision of results, enhance arguments, and deepen mathematical understanding.

Attend to precision. (SMP.6)
Attending to precise detail increases reliability of mathematical results and minimizes miscommunication of mathematical explanations.

Look for and make use of structure. (SMP.7)
Recognizing a structure or pattern can be the key to solving a problem or making sense of a mathematical idea.

Look for and express regularity in repeated reasoning. (SMP.8)
Recognizing repetition or regularity in the course of solving a problem (or series of similar problems) can lead to results more quickly and efficiently.
The Science Curriculum Map has been developed by teachers for ease of use during instructional planning. Terminology found within the framework of the curriculum map is defined below.

**Next Generation Sunshine State Standards (NGSSS):** a set of content and process science standards that define with specificity what teachers should teach and students should know and be able to do; adopted by the Florida State Board of Education in 2008

**NGSSS Body of Knowledge:** the broadest organizational structure used to group content and concepts within the curriculum map and include the following: Nature of Science, Earth Science, Physical Science and Life Science (also known as Reporting Category)

**Standard/Big Idea:** an overarching organizational structure used to describe the scope of a selected group of benchmarks; for example, The Characteristics of Science Knowledge, Earth Systems and Patterns, Forms of Energy, and Interdependence

**Unit of Study:** an overarching organizational sub-structure comprised of a collection of topics used to group content and concepts for a more narrow focus

**Topics:** a grouping of benchmarks and skills that form a subset of scientific concepts covered in each unit of study

**Benchmarks:** the required NGSSS expectations presented in the course descriptions posted on CPALMS by FLDOE

**Learning Targets/Skills:** the content knowledge, processes, and enabling skills that will ensure successful mastery of the benchmarks

**Vocabulary:** the content terminology and other academic language and phrases that support mastery of the learning targets and skills; for teacher- and student-use alike

**Prerequisite Learning:** the benchmarks assigned to previous grade levels that support learning within the current grade level

**Pacing:** a recommendation of time frames for initial delivery of instruction and assessment in preparation for that occurs on the grade 5 Statewide Science Assessment (SSA) including “fair game” content review

**Teacher Hints:** a listing of considerations when planning for instruction; may include suggestions or ideas for review

**Resource Alignment:** a listing of available, high quality and benchmark-aligned materials including: labs, strategies, lessons, and videos from textbook and other media sources. All suggested resources may be accessed in Canvas.

**Formative Assessment Strategies:** techniques that can be used before, during, and after instruction to evaluate student learning. The Formative Assessment Strategies document may be accessed in Canvas.

The District Science Office recommends that all students engage in hands-on, minds-on science experiences DAILY.
